EXPERIENCE

Anheuser-Busch, *Software Engineer Intern - Artificial Intelligence* June 2026 - August 2026

- Developed and built a generative AI social media response application for three global beverage brands across nine channels using **Python**, **OpenAI APIs**, **SQL**, **Fast API**, and **Azure**, increasing potential user comment response volume ten times.
- Engineered **RESTful API endpoints and backend services** with FastAPI to integrate LLM-generated responses with real-time social media data and downstream production workflows.
- Built **Pytest** test suites covering core application logic and API functionality, improving reliability and catching regressions before production deployment.
- **Engineered Prompts** to maintain brand voice, resulting in a 96% approval rate for generated replies by the Community Management team and higher engagement than human-written replies on flagship brand social media channels.
- Built **ETL** pipelines in **Databricks** (PySpark, SQL) to ingest and transform real-time social media data, enabling production deployment of the AI response agent.
- Containerized AI applications with **Docker** and implemented **CI/CD** workflows to automate testing and deployment, ensuring consistent development and deployment across environments.
- Collaborated with data scientists, software engineers, and the social media team in an **Agile** environment to gather requirements, develop features, and deliver AI solutions.
- Managed source code with **Git**, contributing through feature branches, pull requests, and code reviews while following software engineering best practices.

PROJECTS

Golf Tracker Website - Solo Developer | GitHub

- Developed a full-stack golf tracking application using **JavaScript, Node.js, Express, React, MongoDB, Mongoose, and Microservices**, enabling users to track golf rounds, scores, courses, and player data through a responsive web interface.
- Designed and integrated a **RESTful API** with database models, request validation, asynchronous error handling, and CORS to support reliable communication between the frontend and backend.

Golf Swing Sequencing - Solo Developer | GitHub

- Built a computer vision pipeline with **TensorFlow** and **OpenCV** to process golf videos and classify swing phases.
- Designed a CNN-LSTM architecture to classify swing phases from video frames, achieving 70% overall accuracy (80%+ on key phases like backswing and follow-through).

EDUCATION

OREGON STATE UNIVERSITY | Bachelor of Science, Computer Science (GPA: 3.95) **2024 - 2026**

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Database Systems, Operating Systems, Computer Networks, Software Testing

SKILLS

Languages: Python, SQL, JavaScript, Typescript

Software Engineering: REST APIs, FastAPI, Node.js, Express, React, Git, Bitbucket, Docker, CI/CD, OOP, Microservices, Unit Testing, Code Reviews, Pytest, Agile, Linux, Github Actions, Microsoft Azure

AI / Machine Learning: TensorFlow/Keras, PyTorch, Scikit-learn, OpenAI API, MLflow

Data Engineering: PySpark, Databricks, ETL Pipelines, BigQuery, Data Warehousing

Data & Analytics: Pandas, NumPy, A/B Testing, Statistical Analysis, Power BI, Tableau
